CRM Details

<u>Control Statistic Details</u>		<u>Neutron Activation Analysis Results (ppm, unless otherwise noted)</u>		<u>Major Elements by Fusion / XRF (%)</u>	
Control statistics were produced from results accumulated in the April-2008 round robin. A total of 100 fire assay results and 35 results from an aqua regia technique were used to certify this material.		Antimony	<0.1	Fe	nr
<u>Material Description</u> This material is described as a Head composite.		Arsenic	0.7	SiO ₂	nr
		Barium	670	Al ₂ O ₃	nr
<u>Colour Designation (ISCC-NBS, SP440)</u> This material is medium light gray in colour.		Bromine	0.5	TiO ₂	nr
		Cadmium	<5	MnO	nr
<u>Usage</u> This product is for use in the mining industry as a reference material for monitoring and testing the accuracy of laboratory assaying.		Caesium	1.2	CaO	nr
		Calcium (%)	nr	P	nr
<u>Preparation and Packaging</u> All CRMs are dried in an oven for a minimum of 12 hours at 110°C. The dry material is then pulverised to better than 75 micron (nominal mean of 45 micron) using an air classifier. The material is then homogenised and stored in a sealed, stable container ready for final packaging. Materials are statistically sampled from stores, then packaged into either heat sealed, air tight, plastic pulp packets or screw top sealed plastic containers ready for distribution. All packaging has been chosen to ensure minimal contamination from outside sources during shipment, use and storage.		Cerium	63	S	nr
		Chromium	68	MgO	nr
<u>Assay Testwork</u> All standards are tested thoroughly in the Geostats bi-annual laboratory survey. This involves assaying by multiple laboratories from around the world. Results are compiled into a comprehensive report detailing statistics for each standard. Assay distributions are checked and processed statistically, producing monitoring statistics for these standards. Materials are tested regularly to ensure stability and homogeneity.		Cobalt	36	K ₂ O	nr
		Europium	2	Na ₂ O	nr
<u>Stability</u> This product remains stable in its original packaging, away from direct sunlight.		Gold (ppb)	1320	LOI1000	nr
		Hafnium	6	Neutron Activation Analyses and Fusion / XRF Analyses are single results and are indicative only. These are provided for matrix identification purposes.	
		Iridium (ppb)	<50
