Mining Industry Consultants  
Reference Material Manufacture and Sales

## Certified Gold and Silver on Carbon Reference Material

# GBC615-2

### Certified Control Values

#### Gold

Gold Grade	467 ppm
Standard Deviation	18 ppm
Confidence Interval	+/- 4.88 ppm

#### Silver

Silver Grade	57 ppm
Standard Deviation	nr ppm
Confidence Interval	nr ppm

### CRM Details

#### Control Statistic Details

Control statistics were produced from a dedicated certification program in March-2015. A total of 58 gold results were used to certify this material.

#### Source

Minesite Carbon Material

#### Usage

This product is for use in the mining industry as a reference material for monitoring and testing the accuracy of laboratory assaying. Drying of this material at 105°C is required prior to analysis.

#### Preparation and Packaging

All CRMs are dried in an oven for a minimum of 12 hours at 105°C. The dry material is then pulverised to better than 75 micron (nominal mean of 45 micron). The material is then homogenised in a vee-blender and stored in a sealed, stable container ready for final packaging.

Materials are statistically sampled from stores, then packaged into heat sealed, air tight, foil lined pulp packets ready for distribution. All packaging has been chosen to ensure minimal contamination from outside sources during shipment, use and storage.

#### Assay Testwork

This material was certified in a dedicated certification program involving six laboratories. 10 samples of the final material were submitted to each laboratory for analysis.

#### Stability

This product remains stable in its original packaging, away from direct sunlight.

#### Material Safety

This product is not hazardous and non-toxic.
